Read me first

This document describes the installation requirements for the BoltricsService.

To be able to print from the Business Central web client we use a local BoltricsService running in IIS. This can be installed on an existing print-server or combined with the Telnet-Server.

If you have any questions, please contact our Support department:

- Email: it-admin@boltrics.nl
- Telephone No.: +31 (0)318 742 550.

Server Requirements

Minimum Hardware Requirements

2 vCores 2.0 GHz;
Memory 8 GB;
Disk space per (virtual)drive: 25 GB Free Disk Space;

Minimum Software Requirements

Windows Server 2016 / 2019 Standard or DataCenter;
Powershell 5.1;
IIS;
.Net 4.8;

Network Requirements

Firewall

Below you can see the requirements for the Firewall rule.
This only applies to Boltrics and Microsoft Cloud customers.

For IP-addresses whitelisting, please see [our documentation about IP-Addresses](#)

Installation

Run Powershell as admin and execute the below script.

```
[System.Net.ServicePointManager]::SecurityProtocol = [Net.SecurityProtocolType]::Tls12
$Url = "https://bpbcdnloads.blob.core.windows.net/software/BoltricsService/Installation.ps1"
Invoke-Expression "$(Invoke-WebRequest -Uri $Url -UseBasicParsing)"
```

This will install the latest version, or update your current BoltricsService to the latest version.
